

### **Item Leasing Package (ILP)**

**Item Leasing Package (ILP)** – is a defined collection of features that provide the most sophisticated tools for leasing or renting serialized items. This allows you to manage a fleet of leased items and create customer specific rental plans for all your lease activity. The Item Leasing Package (ILP) includes:

- **Rental Calculation Program (RCP)** – is a collection of features that allow you to calculate rental charges for serialized items. This program allows you to create simple or complex rental agreements for your clients and vendors. Calculates per period rent based on rates, currencies, and periods you define.

- **Serialized Item Tracking (SIT)** – is a collection of features that allow you to effectively managed serialized items. Individual items have user-defined associated information. **Container TRACKER®** tracks individual item history. It also manages outloop to calculate items due for maintenance/testing. Serial Item Tracking requires users to select serial numbers from system list eliminating entry errors. Automatic locate and find-to-move functions are included.

- **User Defined Information** – is a collection of features that allow users to define information to add to transactions. Users define when their specific information must be added to transaction information. This also allows you to create, edit and manage selection lists you define. The UDI features allow you to populate defined lists with specific data and manage the lists. The user also defines the criteria for information fields. User fields are configurable to protect data; users can specify if fields are optional or required, selected from a list always, optionally or manually entered.
