

## System Package Descriptions

With the release of **ContainerTRACKER®** Version 4.1 we have defined seven system packages that meet the most common customer needs. These packages are combinations of existing **ContainerTRACKER®** features and the new features available in Version 4.1. These packages simplify the option selection process and reduce the cost of the most common systems. The systems packages are 15-25% less expensive than buying the included features individually.

### System Packages

*Non-Serialized Tracking Basic* – This is the minimum **ContainerTRACKER®** system. It is ideal for tracking non-serialized items and maintaining accurate inventories throughout the system. It includes all **ContainerTRACKER®** Standard 4.1 Features.

*IBC Basic* – The IBC Basic Package is the right combination of features to manage Intermediate Bulk Containers (IBCs) in a lease/rental system. Rental calculations allow you to determine the exact dynamic cost of your systems performance. This system provides all the Item Leasing Package (ILP) features which are a combination of the Serialized Item Tracking (SIT) features, the Rental Calculation Program (RCP) and the User Defined Information (UDI) features.
